

Colour for life

High Performance Residential Doors

Welcome to a new world of residential doors

Your front door is as individual as you are and a statement that creates a lasting impression of you and your home.

A new revolution

Composite doors are a new revolution in door technology. Made with **beautiful proportions** and symmetry. Crafted with attention to detail, our doors combine the benefits of a modern pvcu material door with the feel and aesthetic appeal of a traditional timber door.

Outstanding performance.

All our doors offer outstanding **energy saving** performance, added **safety and security** for peace of mind, exceptional weather proofing and are **low maintenance**.

Make a wise investment. One that will enhance the appearance and character of any home - period, or contemporary, town or country which discerning homeowners will truly adore.

Choose from an extensive range of beautiful door styles with a wide range of colour and decorative glazing patterns to match.

Suitable for front or back door applications.

Solid as a rock

Energy efficient

Our door is the thickest on the market today at 68mm. In fact 30% thicker than traditional timber doors. Which makes ours not only much stronger, but also gives a **superior thermal performance and enhanced acoustic performance.**

It makes ours more **energy efficient**, saving you on heating bills.

This is made possible by using a high-density polyurethane foam which forms a solid composite construction to fill the assembly, adding to an almost **impenetrable** door.

Unlike other doors, there is no timber involved, which means no twisting or warping of the door itself. Instead, **environmentally friendly** pvcu sections with dedicated full steel reinforcement substrates are used for the door skins to be applied to.

Peace of mind security

This results in a door which is high impact resistant and tested to the most stringent security standards.

Double the Performance

Our '**double rebate**' feature means that we have an enhanced weather sealed performance compared to normal single rebated doors.

Making a difference

Our solid strength doors are British made through and through. Ours are built to give you confidence and built to last.

Ours outperform the most stringent and recognised consumer standards.

Styles

Our popular range of beautiful door styles add character and style to any home from traditional period to contemporary, town or country.

You can choose a style with different privacy levels and security, as well as varying degrees of light you want through to your home from our wide choice of matched glazing options.

Colours for life

Our doors are exactly this. Our state of the art thermoset processing creates pre formed door skins that give a finish with an **extra 'sharp' high grain textured definition** with a truly authentic look, feel and appeal of a real wood grain door.

They are laboratory tested to withstand even the most extreme sunlight conditions. This means the colour of your door does not fade and will look as colourful as the day it was installed.

Our GRP 'through colour' doors are available in a choice of nine popular colour grain finishes.

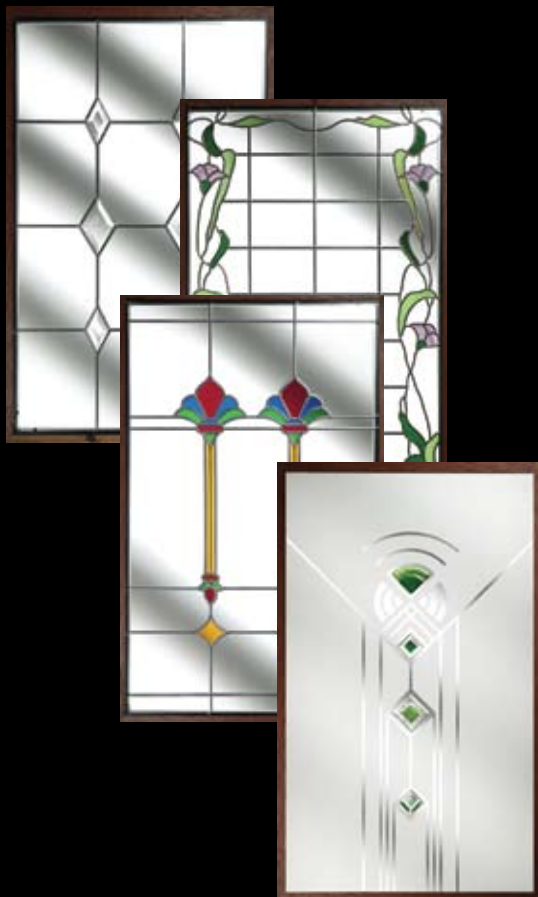

Wood grain effect doors are hand finished and so unique that no two doors are the same.

Decorative Glazing Options

Choose from a wide selection of decorative overlay patterns and obscurity levels to match your door style - from floral to traditional and fusion to bevelled in a choice of colours.

A choice of feature and security glass is available as standard - toughened or laminated.

Obscurity Levels

We offer six levels of obscurity to suit your chosen glazing option and door style with different privacy levels.

Solid door

6000 - A solid door offering total privacy from the outside. Glazing free - this door is also ideal for more secure needs. Suitable for front or rear door application.

Dual Glazed Top Panel

6010 - A popular and traditional style that has charm, giving high privacy levels and security from the outside. The dual glazed toplites allow good natural light into your home.

High Security Performance Hardware

Doors are fitted with high security multi point door locks and adjustable flag hinges as standard. Both conform to the latest Security Standards (PAS024) and Secure By Design and resistance to water and air penetration requirements (PAS023).

Low threshold

We have an optional aluminium low threshold available for easier wheel chair or pram access. Available in 15mm and 30mm heights.

Performance

- We meet the requirements of the most stringent and recognised consumer British security and safety standards.
- Doors pass the PAS024 security standard, which measures resistance to a high level against forced mechanical and human entry.
- Doors pass the latest PAS023 standard at the highest level, which measures a high resistance to air and water penetration.
- Our doors also meet the requirements of 'Secured By Design' – a standard recognised by the Association of British Insurers.

UV stable tested

Doors are tested to withstand extreme sunlight conditions and are UV stability guaranteed to 10 years.

Environmental considerations

Our products are environmentally friendly. We use CFC free polyurethane foam for the inner core and a timber free construction throughout. Manufactured under ISO14001 Environmental Management System licence.

All extruded components are sourced in the UK.

Colour Accuracy

Every effort has been made to match the colours shown as close as possible to your chosen product. Images of colour swatches will vary slightly to the finished product. The brochure is designed to give a better idea of the colour options available. We advise that you ask your installer for a swatch sample.
